

Caroline Lyall BSc (Hons) MRQA

Quality Assurance Associate

Caroline graduated from the Open University with an honours degree in Science. Her first scientific job was as a Histopathology Technician at Charles River Laboratories in 2010. In 2013, Caroline moved to Harlan Laboratories, Switzerland to work as a Laboratory Technician within the Pathology and General Toxicology departments. Here, Caroline performed a more senior role which involved quality control and training of technicians. She also undertook some managerial responsibilities, such as people management and overseeing the daily running of the laboratory in absence of the Line Manager. In this time, Caroline also completed secondments to the Harlan site in Barcelona.

Her positions at Harlan and Charles River required implementation and adherence to the OECD Principles of GLP. Caroline used this practical experience of GLP to join TMQA as a Quality Assurance Assistant in January 2016 and moved to Quality Assurance Associate in August 2016.
